HEITEC Accessories for HeiCase and 19" cabinets

Front panels

## Cover for unused installation space that provides passive ventilation

With its HeiCase family HEITEC offers versatile configurable instrument cases and system enclosures.

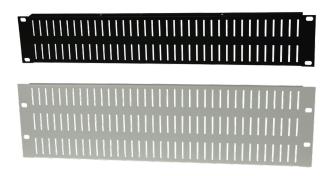

HEITEC offers a wide range of front panels to cover unused installation space in the HeiCase and to provide additional ventilation. Installation heights from 1U to 3U are available. Each variant is available in a flat and a more stable folded version.

All components are powder coated (color: RAL 7035 or RAL 9005) and are characterized by high quality. They are fastened in the cabinet using the fastening material supplied.

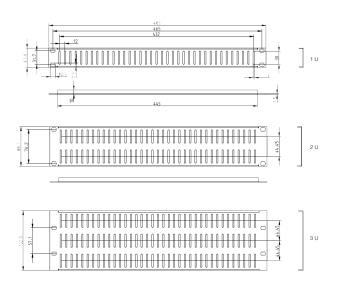

Since all front panels correspond to the dimensions of the 19-inch standard, these are not limited to the HeiCase family, but can be used for any standard 19-inch cabinet without any problems.

## Accessories for HeiCase and 19" cabinets Front panels
