

IPC-Chassis with front connections for 19-inch installations

The 4 U IPC enclosure line in 19-inch format was developed to meet the requirements for stability, security and flexibility in demanding industrial environments. The ATX-Chassis offer the necessary protection for your valuable technology and impress with their design and functionality.

The robust construction made of sheet steel ensures reliable safety, while the modern, black painting gives the housing a contemporary appearance and underlines its durability in a visually appealing way.

The front-facing design allows easy access to all connections, drives and the power supply. This is essential, for example, when installing in a cabinet system that is closed at the rear. Thanks to the two integrated fans in the back, the built-in system always remains cool, efficient even under demanding conditions.

The cases can be equipped with a variety of accessories such as additional USB ports or power supplies. In addition, HEITEC also offers tailor-made designs including custom painting and printing.

The HEITEC-Chassis, built to the ATX or mATX standard, can be delivered fully assembled, equipped and wired according to the principle of "Plug & Play". Whether alternative housing formats are required, or a completely developed industrial PC system, including mainboard, hard drives and input/output cards - HEITEC is a reliable partner for tailor-made industrial PC solutions, known for quality, stability and flexibility.

IPC-Chassis for installation in 19-inch cabinets

Drive bays, USB 2.0, power supply slot and controls are integrated into the front panel

Rear panel with two integrated fans and additional ventilation options

Order No.	Description	Height	Width	Side Panel Depth	Surface
